1. About Us

Yayasan Bali Peduli (YBP) is a not-for-profit, non-governmental organisation (NGO) based in Bali, Indonesia. Their mission is to prevent the spread of HIV in Bali and provide support for people living with HIV (PLWH).

YBP was formed by a group of concerned Bali residents under the guidance of Dr Frank Stephen Wignall MD. Dr Wignall is a HIV physician and clinical researcher, National Policy Advisor for M2M HIV to the Indonesian National AIDS Commission and a former Senior Medical Advisor to the Clinton Foundation.

YBP operates three core programs: Clinic Services, Outreach/Education and Support for people living with HIV (PLWH).

The organisation runs two medical clinics located in Ubud and Kuta (until December 2015). Both clinics provide one stop service: HIV/STI testing, treatment and counselling services. The Outreach/Education program, launched in 2013, aims to raise awareness for HIV and sexual health as well as promotes early testing. The objective of YBP Support Programs is to help newly diagnosed patients navigate the initial challenging period of their lives as they start treatment and, later, support their transition back into the community.

YBP receives no governmental monetary support and is entirely funded through grants, private donors and fundraising activities. The Ministry of Health provides free antiretroviral drugs (ARV), reagents, condoms and lubricants.

YBP is a legally recognised foundation under the approval of the Ministry of Justice and Human Rights of Indonesia.

2. Message from Chairperson

Om Swastyastu..... Greetings from Ubud, Bali!

As I write this it suddenly dawns on me that Bali Peduli is entering its fifth year of existence. Where has all the time gone?

Along the way we have grown from a clinic of four employees to an organisation with nearly thirty staff members and two clinics, serving thousands of patients.

The initial medical service unit in Kuta has since moved to Denpasar with extended opening hours. I am humbled and hugely grateful to everyone who has made it possible for us to deliver clinic services in a bigger space, thus providing more comfort and privacy to our patients. A huge shout-out goes to those whose generous pledges during the La Lucciola Benefit Dinner enable us to support the growing demands for our services.
The clinic in Ubud, Klinik Anggrek, has added twice-weekly evening hours to allow for further flexibility for those seeking advice and testing.

Bali Peduli's Outreach/Education program continues to expand both in terms of size and activities. An MoU with the City of Denpasar Indonesian Red Cross means we have access to more schools, thus reaching greater numbers of young people. The work in Bali prisons now covers areas outside of Gianyar and Badung. And an encouraging trend is where the café workers in Gianyar are now coming for testing of their own volition. This is testament to the success of the Bali Peduli model of HIV service management, and the skill and dedication of the team. Kudos is due to our clinic and outreach teams for their hard work, commitment and outstanding dedication.

None of this would be possible, of course, without the far-sighted generosity and support of our existing individual and corporate donors. I cannot thank you enough!

I would also like to extend a special appreciation to MEDQUEST who helped set up Bali Peduli's first clinic with the CD4 testing machines, and continue their support to date.

Of course not all is smooth sailing. Funding continues to be a constant worry, particularly with the increasing number of people going through the clinics and the need for PLWH support. We are constantly walking a tight rope of wanting to help everyone, and being very aware of our limited finances. The encouraging thing, however, is that we are also seeing funds from new donors, and voluntary contributions from patients.

So, I believe that the future of Bali Peduli looks very bright. My huge "Thank You" to all of you – donors, staff, volunteers, supporters, patients and friends - for making this amazing journey possible.

Matur suksma.. Thank you!

Lily Wardoyo
Chairperson, Yayasan Bali Peduli

3. Founder's Column

Consistent use of antiretroviral medication stops transmission in all sexual transmission risk groups.

We've known since 2011 that in heterosexual discordant couples (one partner HIV+ positive and one negative) that if the HIV positive partner used antiretroviral (ARV)s drugs consistently and his/her viral load (number of virus particles detected in the blood) was depressed to levels where it was undetectable, then transmission of HIV to the negative partner was reduced by 96%. The problem with that study (HPTN052) was that too few men who have sex with men (MSM) were included. The PARTNER study seeks to fill that gap by recruiting more MSM discordant couples where the positive partner had already been on ARVs and had an undetectable viral load. The research team took careful sexual histories and genotyped (checked HIV RNA to see if it is the same virus as the positive partner) the HIV found in any previously negative partners. While all discordant couples were encouraged to use condoms, there are often exceptions. Participants were asked to record all sexual encounters where unprotected sex occurred. From more than 2,500 discordant MSM couples there were thousands of cases of unprotected sex acts and there was no transmission. There were HIV infections among negatives but these were from sexual exposures with other than their HIV positive partner. The good news is that there is no apparent risk of infecting negative partners if HIV positive individuals are adherent and take their medication and achieve undetectable viral load. Bali Peduli strives to help our clients understand and supports them through the challenge of taking daily medication so that they stay healthy and productive and their sexual partners remain HIV negative.

4. Key Achievements

4.1 MoU with Denpasar Red Cross

In November 2015, Bali Peduli signed a Memorandum of Understanding (MoU) with the Indonesian Red Cross – City of Denpasar – formalising a relationship united in preventing the spread of HIV amongst adolescents in the Denpasar area.

Together, Bali Peduli and Indonesian Red Cross aim to provide information about sexual health and HIV to high school students, and run mobile clinics enabling young people to easily be tested for HIV.

The goal is to educate young people about HIV risks so they are informed about how to protect themselves, as well as to help them understand and experience the process of HIV testing so they feel comfortable getting tested in the future.

Bali Peduli has been working alongside Indonesian Red Cross to deliver HIV education to students in Denpasar high schools where, under the new MOU, HIV testing will be made available for the first time.

This will be the first time that high school students will have access to HIV testing in their schools.

4.2 Prison Program

For over a year Bali Peduli has been working with Gianyar Prison, providing regular HIV testing and education sessions with new inmates. As a result of the success of this program, Bali Peduli was invited by Karangasem Prison to implement a similar program with their inmates. In October 2015, the Bali Peduli team conducted the first education and testing activity at Karangasem Prison.

Firstly, Bali Peduli staff conducted education around sexual health, STIs and HIV prevention. The session was interactive and gave the participants a chance to interact with the information presented and ask questions in a respectful non-threatening environment.

Secondly, inmates had the option to undergo testing for HIV and STIs, administered by a Bali Peduli nurse.

Bali Peduli's mobile clinics, such as this one, involve a mix of outreach and counselling as well as medical staff. This ensures a full suite of services; education, counselling and testing. It is hoped that this program will help prisoners to protect themselves against HIV risks, and provide treatment and support for those already infected.

Bali Peduli is currently the only NGO offering these services in Bali's prisons.

4.3 Clinic move from Kuta to Denpasar

After protracted negotiations and permit applications, the clinic move from Kuta to a larger space in Denpasar was finally realised in December 2015.

The new clinic has been made possible by the generous donation of Paul Latourell's family and the outpouring of support from Paul's many friends on Bali and abroad, including two benefit dinners hosted by La Lucciola in Seminyak.

Insufficient space has long been an issue for Bali Peduli clinic services, and the new location offers more room for Bali Peduli's growing needs. With the opening of this new larger facility Bali Peduli will be able to accommodate the growing demand for HIV testing and treatment in Bali, as well as expanding counselling programs, and adding group sessions.

At the new clinic location, the Bali Peduli team of staff will continue to provide full testing, treatment, and counselling programs free of charge – with longer opening hours - in line with Bali Peduli's mission: to eliminate barriers to care and treatment for HIV.

Early testing and treatment saves lives and helps prevent the spread of HIV.

"Get Tested - Get Treated - Get on With Your Life."

5. Bali Peduli Programs

5.1 Clinic Services

Bali Peduli clinic service is the main pillar of their mission of preventing the spread of HIV in Bali. The two world-class clinics are located in the tourists areas of Kuta (since relocated to Denpasar), and in the hill town of Ubud. Both clinics offer free HIV and STI testing, treatment and counselling, in line with Bali Peduli's vision to eliminate barriers to care and prevent the spread of HIV in Bali.

The objective is to create services that are efficient, friendly, non-judgemental and accessible to everyone, regardless of social/financial status, gender or sexual orientation.

The Bali Peduli model of one-stop service experience, from taking blood samples to delivering results, in less than 60 minutes is currently the only one in the country. The model ensures time-poor clients, such as full-time workers, students and mothers, can access HIV testing services in one visit thus eliminating time and financial barriers.

The Bali Peduli clinics serve a wide range of key at-risk populations (KAPs), from men-who-have-sex-with-men (MSM) and the gay community in South Bali to families, pregnant women, female-sex-workers (FSW) and injecting-drug-users (IDU) in Ubud, and prison inmates in Gianyar and Karangasem.

In Indonesia discrimination and stigmatisation of those KAPs are high, particularly in the public healthcare system. The Bali Peduli fundamental principles of treating everyone with kindness and dignity; regardless of their social status, race or sexual orientation has earned the organisation the trust of the community.

Below are the program outcomes for each clinic during the 2015 calendar year:

Klinik Anggrek – Ubud:

• Clinic visits:	**3,140**	
• New patients:	**1,757**	
• HIV tests:	**1,726**	(64 tested HIV+)
• STI tests:	**2,034**	(204 tested STI+)
• CD4 tests:	**296**	
• Patients on ART:	**120**	

Medical Service Unit – Kuta:

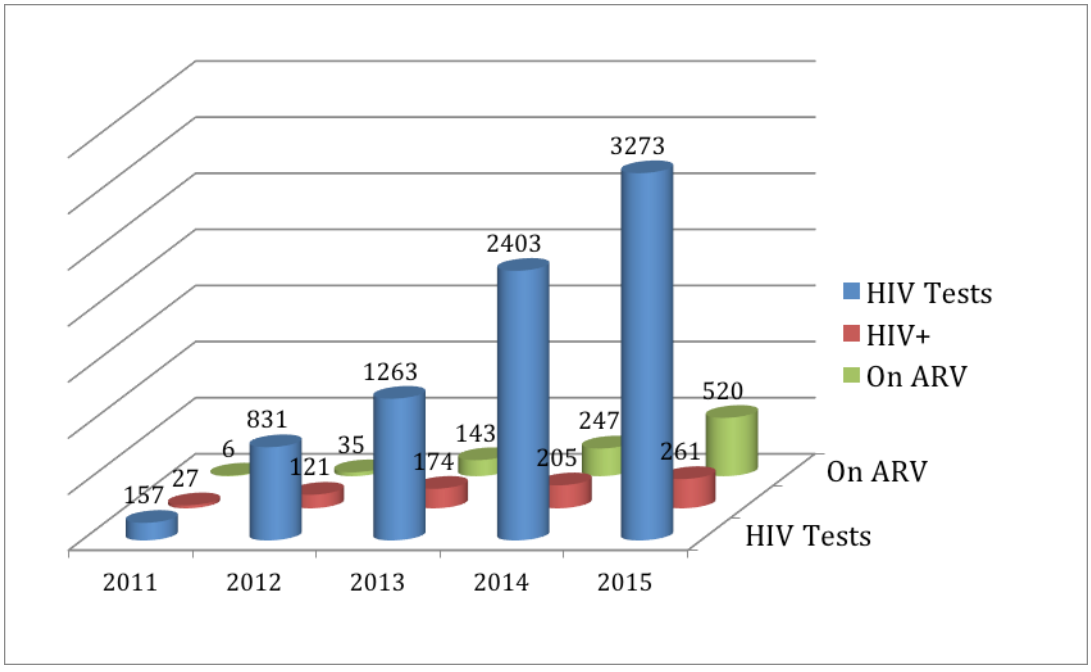
- Clinic visits: **5,188**
- New patients: **805**
- HIV tests: **1,547** (197tested HIV+)
- STI tests: **2,065** (487tested STI+)
- CD4 tests: **547**
- Patients on ART: **400**

From the first time Bali Peduli commenced its clinic services in late 2011 they have seen upwards of 21,000 visits, tested nearly 8,000 individuals for HIV and over 9,200 for STI, as well as supporting about 1,100 patients on ARV.

HIV Tests, HIV Positives & Patients on ARV

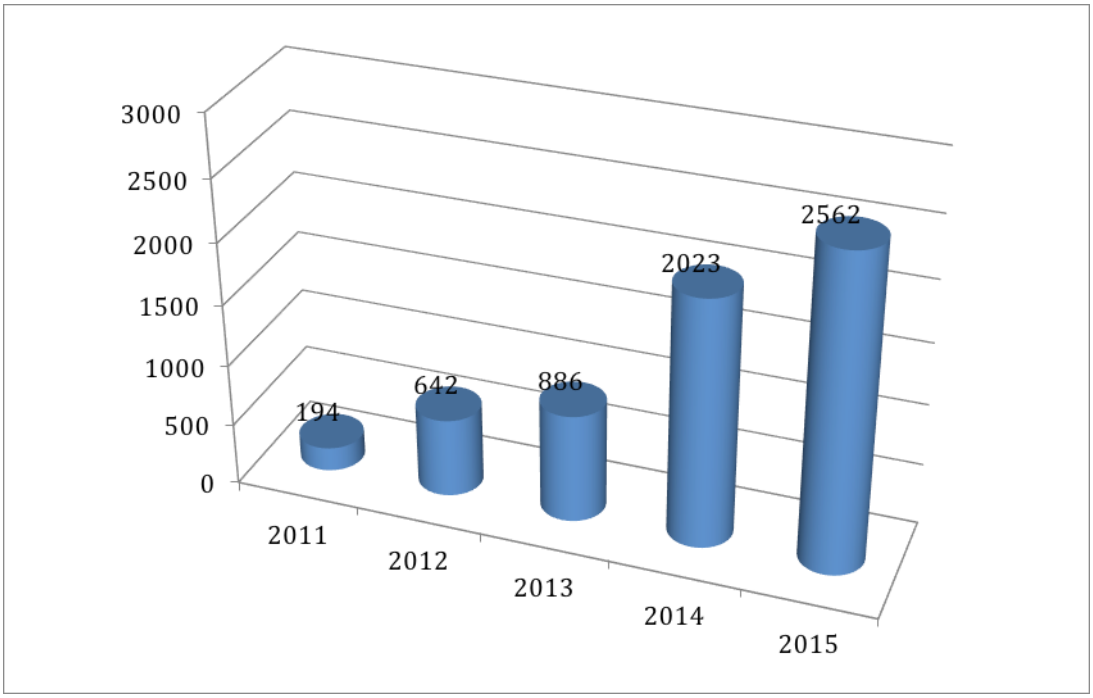
The below chart outlines a steady upward trend, with HIV tests continue to climb; evidence of Bali Peduli continual success in reaching its target audience.

Antiretroviral Therapy (ART) is the treatment for patients who test positive for HIV. ART works to suppress the level of HIV virus in the body, slows down the threat to the immune system, and considerably reducing the risk of transmission.



New Patients

The number of new patients continues to climb. It is now mandatory for all pregnant women to be screened for HIV as part of their blood test. The government has also issued a regulation where public health centres (Puskesmas) now have to provide voluntary counselling and treatment (VCT) services. Through the collaboration of Klinik Anggrek and Puskesmas Ubud II, Bali Peduli has been taking a mentoring role to other Puskesmas in the Gianyar area. A number of these Puskesmas use the Bali Peduli lab in Klinik Anggrek.



5.2 Education & Outreach Program

The YBP Education & Outreach Program aims to provide people with the necessary tools to protect themselves, and others, from HIV and STIs.

In schools, while some teachers and student bodies endeavour to include sexual health in class activities, the delivery are often poor and lacking correct information. Bali Peduli therefore welcomed the opportunity to work with the City of Denpasar Red Cross, paving the way to bring their brand of reproductive health education program to, and working with, more adolescents in the classrooms. For the first time students will have the opportunity to learn first-hand about HIV testing and treatment processes. Index Mundi (2014) reveals that about 40% of Indonesia's population are under 24-year of age which means that millions of young people are at risk of entering sexual debut uninformed on how to protect themselves against the risks of HIV and STI.

Bali Peduli firmly believes that education is vital to preventing the spread of HIV in Bali. The outreach/education team delivers education programs to various KAP support groups, prisons, community centres and youth groups. The sessions cover a range of topics: reproductive health and contraception, HIV and AIDS, STIs, responsible behaviours, and tolerance towards minority groups and people living with HIV (PLWH).

In early 2015, YBP secured the relevant permits, set-up a mobile testing clinic inside the prisons and conducted free HIV and STI testing for all inmates.

Education & Outreach Program – Bali

Outcomes in 2015

- Group Education Sessions: **30**
- Total Participants: **1,226**
- PLWH (people living with HIV) supported:
  - Buddy Program: **611**
  - Positive Living Fund: **61**
- Mobile testing events:
  - Gianyar: **16**
- Individuals receiving information from YBP staff: **4,603**
- Distributed:
  - Condoms: **10,839**
  - Lubricants: **3,010**

Education & Outreach Program – Bali 2013 - 2015

- Group Education Sessions **109**
- Total Participants **4,974**
- Condoms Distributed **30,801**
- Lubricants Distributed **9,723**

5.3 Support Program

A positive diagnosis for HIV can be highly traumatic. Often clients lose hope and direction. Bali Peduli's Support Program aims to re-establish hope and help the client navigate the path to a healthy, productive life.

Those who test positive for HIV are assigned a "Buddy" who will provide emotional support, information about medication and living with HIV. In the initial stages of diagnosis the buddy is often on call 24/7 to reassure clients they are not alone. This approach has proven successful in helping clients during a difficult period in their life and encouraging continuous treatment adherence.

Support Program – 2015

- PLWH Supported -> **2,044**
- PLWH Home Visits -> **305**

5.4 Mobile Testing Program

The Mobile Testing Program aims to bring Bali Peduli services to the many people in Bali who are unable, due to financial or other circumstances, to come to an HIV testing, treatment and counselling facility.

Since it started running the Mobile Testing Program for FSWs in Ubud, Bali Peduli has seen these women coming to the clinic for testing on their own volition. This is considered a real breakthrough and proof of the skill and dedication of the outreach/education and clinic teams.

There were 16 Mobile Testing ran in 2015.

Funds permitting Bali Peduli plans to take this initiative to other locations outside of Gianyar.

5.5 Positive Living Fund

The rampant and deep seated ignorance and stigma towards PLWH often leads to sudden lack of support when a woman/child lost a spouse/father to HIV related illnesses. The resultant emotional and financial hardship can be overwhelming. It is often the case that women lost their home, job and drop out of treatment because they cannot afford the cost of transport to go to a clinic. Often too children drop out of school for the same reason.

The Positive Living Fund was created as a response to this situation. It provides temporary non-medical support to people in critical circumstances. To avoid a culture of dependency, support is (almost) never given in the form of cash. Bali Peduli works with other organisations to put the children back into the school system. The objective of the program is to help recipients to regain their footing and move on to live independently.

Since the Positive Living Fund was formed in 2013, the program has supported and re-established 118 women and children living with HIV.

6. The Team

Board of Trustees
- Lily Wardoyo
- Steve Wignall MD
- I Komang Budi Suwardana
- Peter Beilby
- William Page

Steering Committee
- David Mendoza
- Chris Perks
- Howard Klein

Head Office
- Yunita Mardiani (Operations Manager)
- Lazuardi Aditya Ramadhan (Operations Officer)

Klinik Anggrek - Ubud
- Dr. Ngurah Adnyana (Director, Puskesmas Ubud II, Sayan)
- Dr. Gede Putra Kartika Wijaya (through September 2015)
- Dr. Herru Adriansyah (Attending Physician)
- Ni Wayan Mahendri (Nurse/Midwife)
- Putu Yarini (Lab Technician)

Medical Service Unit – Kuta (through December 2015)
- Dr. Yogi Prasetia (Director)
- Luh Putu Ari Lestari (Nurse/Counsellor)
- Dewa Made Agus Bayu P (Nurse)
- I Putu Sila Adiyang (Nurse)
- Roy Yusanto Dj (Counsellor)
- Akhmad Khumaini (Counsellor)
- Anak Agung Ayu Martiningsih (Lab Technician)
- Dewa Ayu Komang Tri Widya Adnyani (Lab Technician)

Outreach/Education/PLWH Support
- I Wayan Eka Sampurna (PR Coordinator)
- Aryo Cipto Panenang (Program Coordinator)
- Melianus Bere Bria
- Miko Putra
- Ni Wayan Sari Permana Chandra
- Istina Dewi

7. Future Challenges

7.1 Funding

The increasing demand for Bali Peduli services – medical, education and support for PLWH – really is a double-edged sword for the organisation. On the one hand it is encouraging, for it means the model of HIV service delivery is hitting the target audience (and clearly there is a large number of people still to be reached), however, it also puts tremendous pressure on finances, resulting in a constant struggle to raise funds and having to prioritise where spending should be made – not always easy given the fact that very often it is a matter of life and death.

Of late, there is also further indication of a shift away from funding for HIV and AIDS (along with TB and malaria). Add that to the already stretched budget and it becomes obvious that more donor support is crucial if Bali Peduli is to continue its life saving work, and not have to scale back, or close some of the programs (even if temporarily).

In the last quarter of 2015, Bali Peduli was approached by the Gianyar prison service to run an education program and mobile clinic. Since then, this service has expanded to cover Karangasem as well. Bali Peduli sees this service as an important element of ensuring proper HIV management and prevention in the prison system, through education, testing and treatment. This will help inmates reintegrate into society in good health and, if HIV positive, with the knowledge of where to access treatment and support.

Cases of heterosexual transmission are on the rise, and with it the concern for mother-to-child transmission. While it is now mandatory for pregnant women to be screened for HIV and STI, the early testing of babies is not common in the public health system. (In cases where the baby's mother is HIV positive, a "qualitative" test for virus at 6 weeks old will pave the way for a well managed treatment plan if later tests prove positive).

To find out more and help, please write : donate@balipeduli.org or info@balipeduli.org

8. Volunteers

Bali Peduli believes that volunteers play an important role in HIV prevention work in Bali. HIV is a social/community issue which can only be overcome when everyone works together. No contribution, monetary or otherwise, is too small. But everyone does need to work together to overcome this complex problem.

Over the years many of the programs would not have been possible without the work of volunteers, whose involvement makes it possible for Bali Peduli to dedicate the bulk of funding to patient care. For the volunteers it is an opportunity to gain experience, learn from - and work alongside - some of Indonesia's leading experts in comprehensive HIV management.

Bali Peduli is currently looking for volunteers in the following areas:

8.1 Website Manager

The Bali Peduli website was created as a place for the public to find information about the organisation, get in contact with the team for any questions they may have, and for donors, supporters and friends to find out the latest news on Bali Peduli.

This is a casual position; the volunteer will work at a schedule best fitted to his/her own schedule.

8.2 Grant Writer

Funding from grants accounts for a significant portion of YBP's working capital. The grant writer will help to seek out funding opportunities, and prepare grant proposals.
The volunteer must have grant-writing experience and be fluent in English.

This is not a full-time role; the volunteer's time contribution will be based on their availability.

8.3 Graphic Designer

The graphic designer's role is to help create promotional material, newsletters, and digital content. The volunteer must have experience in graphic design, and be conversant with Illustrator and Photoshop.

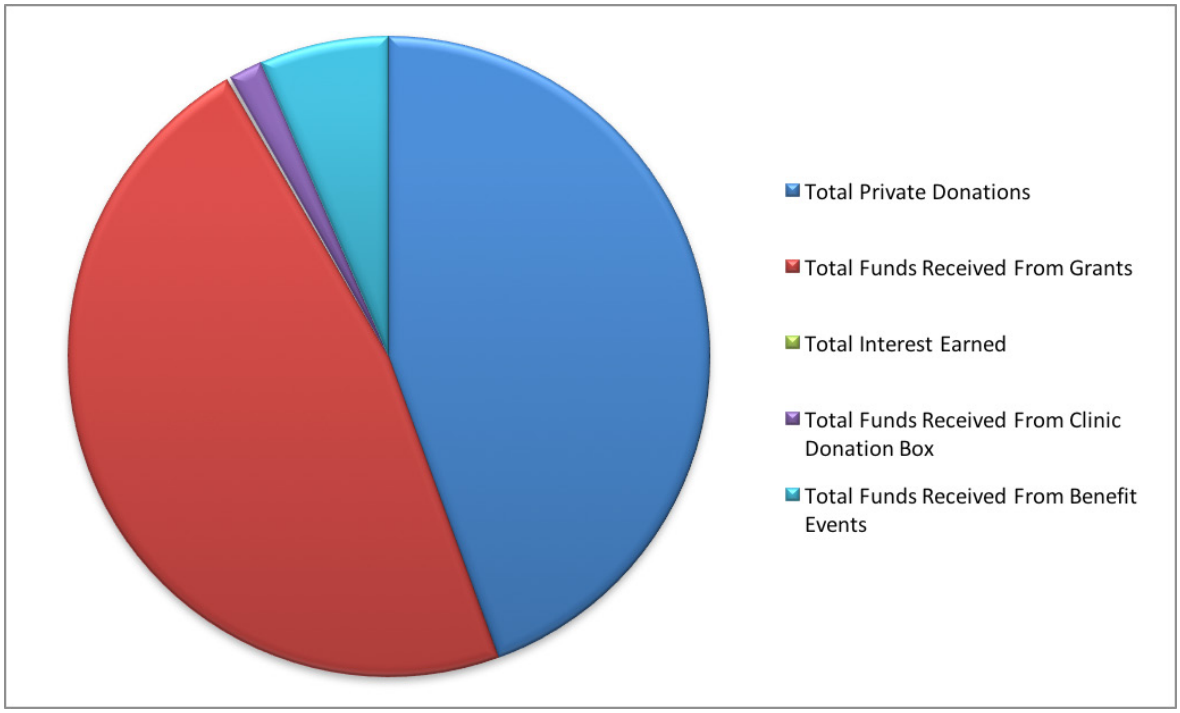
This role is not a full-time position; the volunteer's time contribution will be based on their availability.

To help, please write to us at : info@balipeduli.org

9. Financials

Total Revenue 2015

Bali Peduli does not receive government funding and relies solely on the support of private donors and corporate grants to fund the entire HIV prevention programs in Bali.



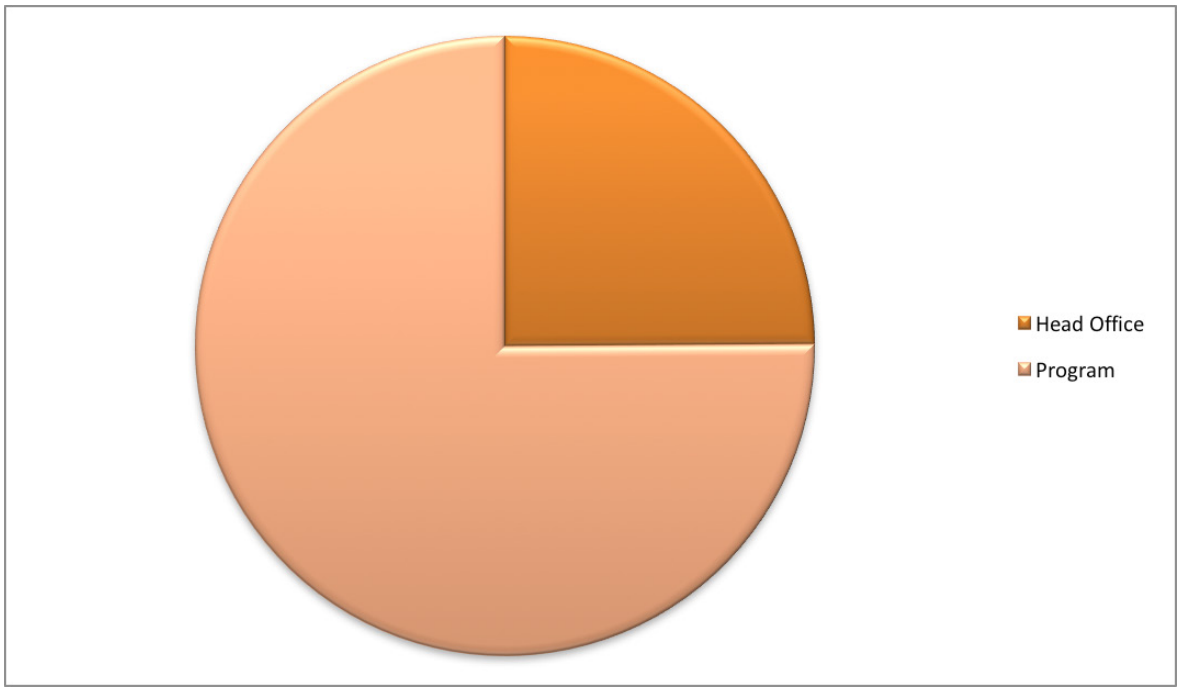
Total Private Donations:	985,620,699 IDR
Total Funds Received From Grants:	1,046,379,700 IDR
Total Interest Earned:	4,417,918 IDR
Total Funds Received From Clinic Donation Box:	37,641,900 IDR
Total Funds Received From Benefit Events:	144,600,000 IDR

In 2015 Bali Peduli received support in grants from:

amfAR (Mel Wolf Foundation):	153,943,000 IDR
DAP – Australian Embassy:	137,432,700 IDR
The Elizabeth Taylor AIDS Foundation:	322,608,000 IDR
NZ HOMF:	432,396,000 IDR

Total Expenses 2015

The following graph shows an average 32% increase in total expenses from 2013 until 2015. Two factors attribute to the increase.
In 2015, YBP saw a 90.26% increase in HIV tests conducted and a 128.32% increase in new patients from the previous year. To meet this demand, YBP had to hire new staff and purchase more equipment; which in turn, increased operating expenses.

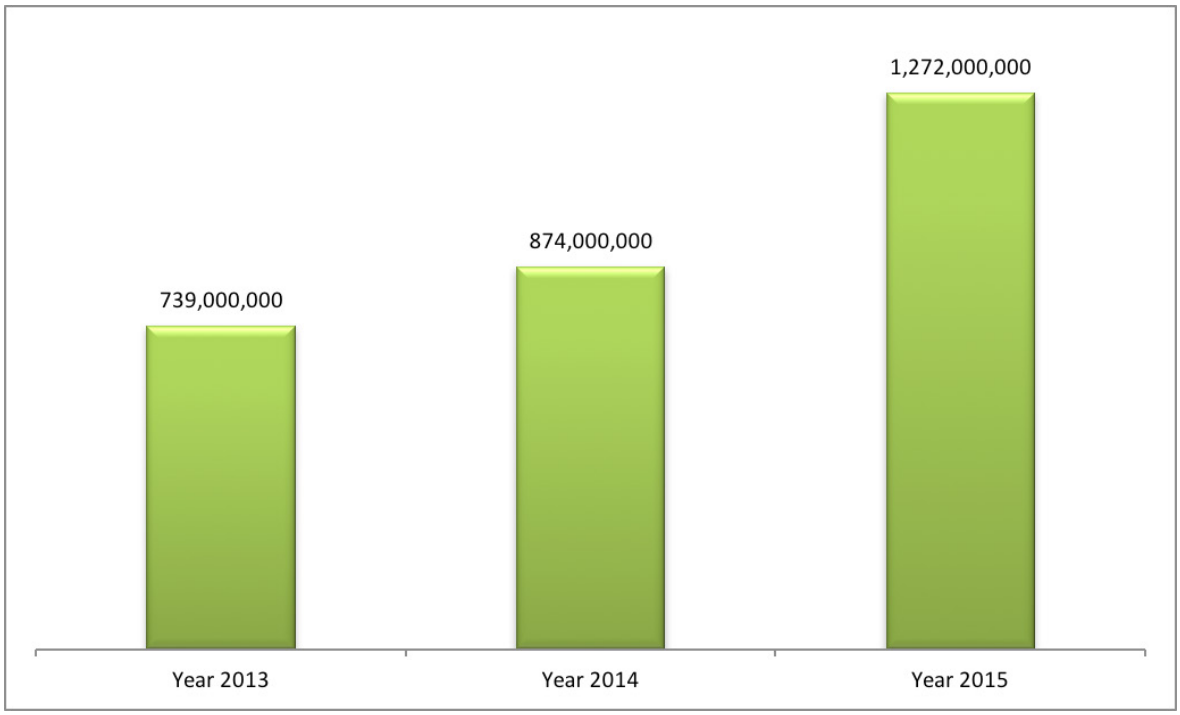


Total Expenses 2013:	1,011,307,961 IDR
Total Expenses 2014:	1,488,368,854 IDR
Total Expenses 2015:	1,693,869,606 IDR

Total Program Expenses 2013 - 2015

YBP strives to use resources in a most cost-effective manner, to ensure donations are used to provide patient care.

The graph shows a steady increase in program expenses from 2013 until 2015 reflecting the upward trend in the demand for Bali Peduli services.



Financial Audit

Drs. Bambang Mudjiono & Widiarto Registered Public Accountants conducted an independent audit of YBP's 2015 financial statements. The full Independent Auditor's Report can be viewed at the following website: http://www.balipeduli.org/about/audit-reports/

The following extracts are from the Independent Audit Report. They outline in detail YBP's revenue and expenses during the year ending December 31, 2015.
